Preparation of validation campaign

CNES Partnerships

MICROCARB

- Supported by French government
- In collaboration with UKSA

MICROCARB objectives : Highly Accurate CO₂ observations

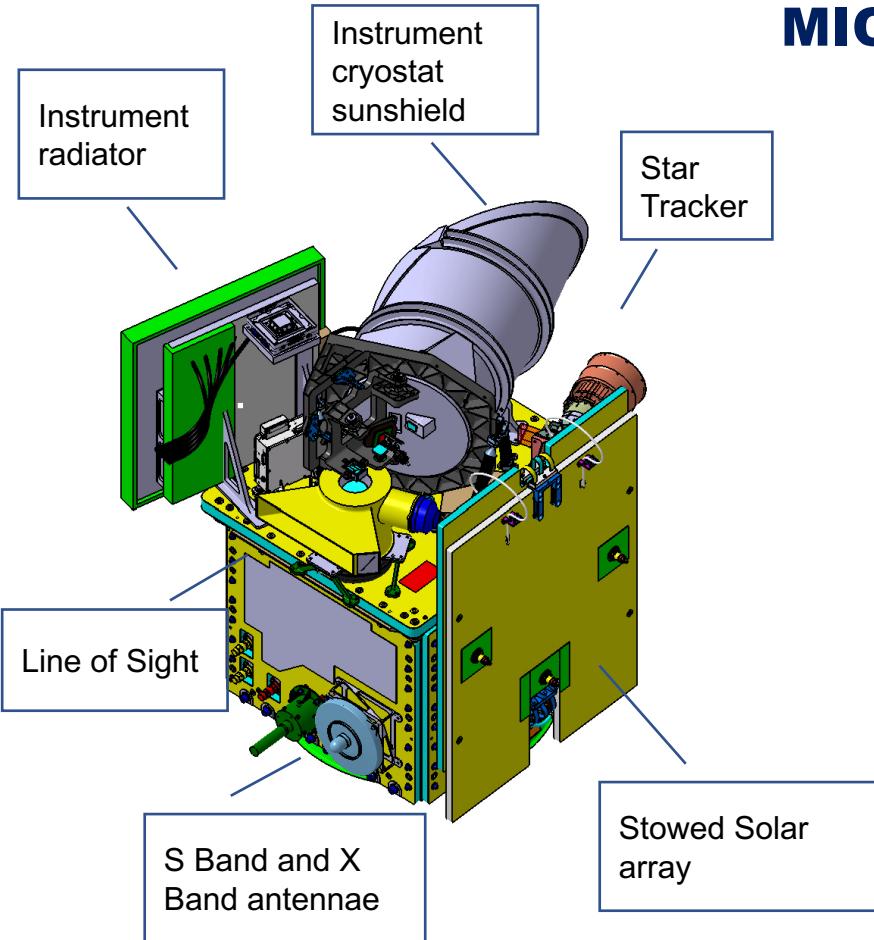

MicroCarb aims to make significant progress in answering the following specific questions:

- Where are the main carbon sources and sinks ? What are the processes that control these fluxes ?
- What is the contribution of land use change to the net land flux?
- How does the Carbon cycle react to large climate perturbations such as El Niño/La Niña events?
- How will the carbon cycle react to climate change?
- + *Test at highest space resolution for cities emissions estimation*

Accurate measurements are required and are difficult to make:

- Precision < 1 ppm & Bias < 0,1 ppm
- XCO₂ spatial gradients are small (< 10 ppm)
- Regional biases flaw the flux computation

MICROCARB Satellite description

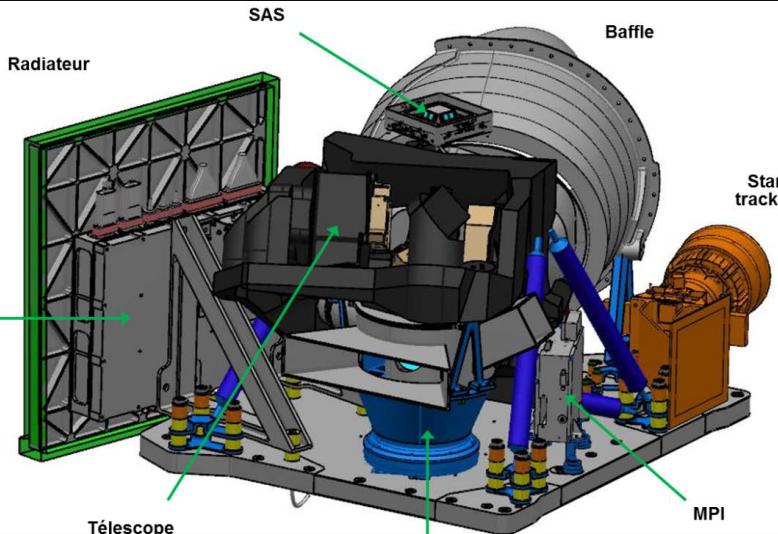

Myriade family (Microsatellite)

- ❖ Mass : 170 kg
- ❖ Power: 100 W
- ❖ Propulsion: Hydrazine 50m/s
- ❖ Telemetry high rate: 156 Mbits/s

Orbite

- ❖ SSO – 649 km – 10h30 LTDN or 13h30 LTAN
- ❖ 25 days - 7 days sub-cycle
- ❖ Lifetime : 5 years

MICROCARB Instrument description

- ❖ Passive spectrometer (echelle grating) in SWIR
- ❖ Unique detector : Sofradir NGP (1000 x 1000 px)
- ❖ Passive cooling: Detector: 140 K; Spectrometer: 220 K
- ❖ Integrated cloud imager
- ❖ Mass: 64 kg (nominal)

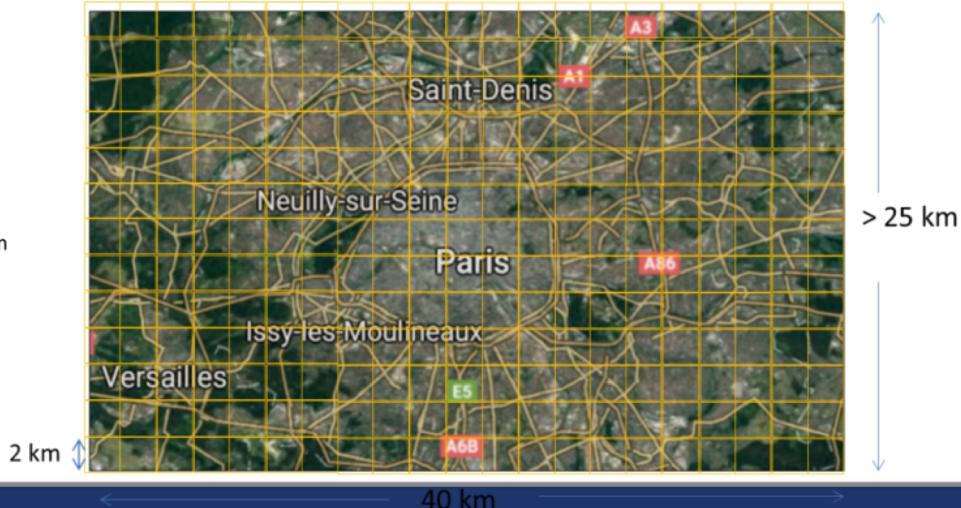

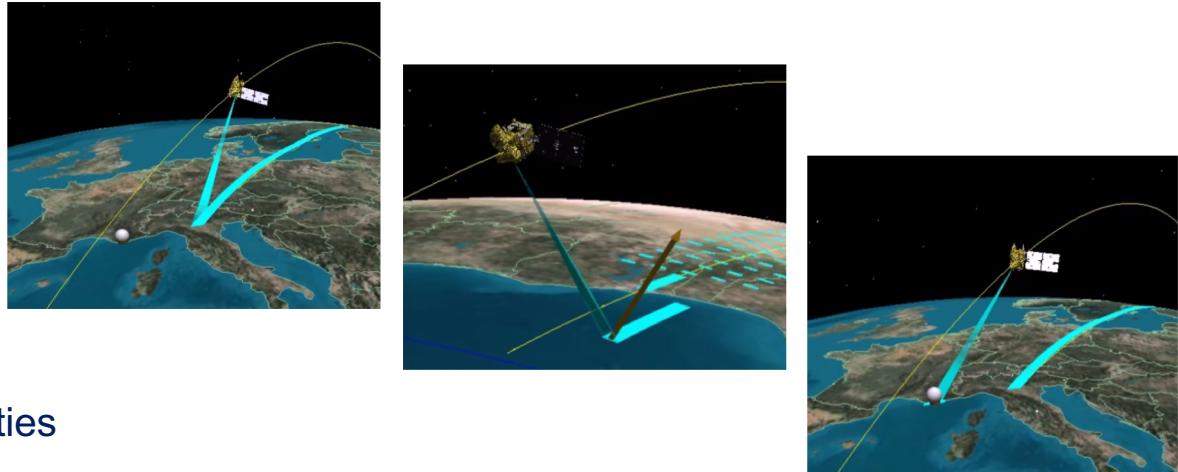

Performances géométriques	Value
Swath	13,5 km
Size of elementary sounding point	4,5 x 9 km = 40 km ²

Performances spectrales	B1 (O ₂)	B4 (O ₂)	B2(CO ₂)	B3(CO ₂)	Number of simultaneous soundings	3
Wavelength centrale (nm)	763.5	1273.4	1607.9	2037.1	Line of sight agility (scan)	±200 km
Bandwidth (nm)	10.5	17.6	22.1	28.1		
Résolution spectrale ($\lambda/\Delta\lambda$)	25 500	25 900	25 800	25 900		
SNR @ Lmean (per channel)	285	378	344	177		

MICROCARB : Agility of pointing

- ❖ Nadir above Land
- ❖ Glint above ocean
- ❖ Target mode for calibration (Sun or TCCON)
 - + Exploratory Mode for City above big cities (pixel 2x2 km²)

MICROCARB next steps

EVENT	Date
RCD Instrument	Juin 2018
End of phase C (RCD satellite)	Décembre 2018
Start AIT PF & satellite	Février 2019
Instrument Delivery	Décembre 2019
Flight Acceptance Review (FAR)	Décembre 2020
Launch date	Mars 2021
End of phase E1 (commissioning)	Septembre 2021

+ Delivery of Version 1 of ATBD and preparation of processing chains, of validation activities with scientific laboratories LSCE, IPSL, LMD, LATMOS, and partnership with UK.

- Scientific PI: Francois Marie BREON, LSCE

Breadboard exposed for the One planet summit in Paris in décembre 2017.

MERLIN : Measurement concept

Platform: **MYRIADE Evolutions** line of product

Satellite (platform + payload)	
Mass	430 kg
Dimensions	160 cm x 120 cm x 160 cm
Power	500 W

- Payload: IPDA Laser Instrument: transmitter based on OPO and Future Laser (FULAS) concept, developed under ESA and DLR contracts

Payload	
Mass	140 kg
Power	150 W
On-line λ on	1645.552 nm
Off-line λ off	1645.846 nm
Pulse energy	9 mJ
Pulse length	20 ns
Repetition rate	20 Hz (double pulse)
Telescope diameter	690 mm

To deliver :

- XCH4 : Column-weighted dry-air mixing ratios of CH₄, along the satellite sub-track
- Associated Random and systematic errors
- Monthly Maps of XCH4 and associated errors

•
•
•

MERLIN System Requirements:

Random error:	< 27 ppb
Systematic error:	< 3,7 ppb
Horizontal sampling accumulation:	50 km (can be shorter depending on SNR)

MERLIN shall be the first active mission in space dedicated to GHG

•

Phases 0 & A

Phase B

Phases C/D & E1

Phases E2 & F

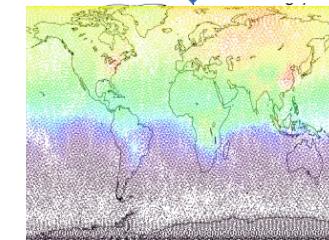

Interest of active mission for CH₄..

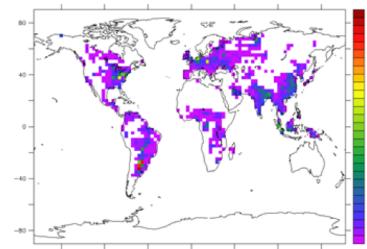

- with lower biases (<3ppb) than passive instruments (auto-calibrated)
- day and night (no sunlight needed)
- At all latitudes (including high latitudes)
- For all seasons

It will open a new dimension of the space observation of greenhouse gases from space.

Columns

Fluxes

GHG observations with IASI (TIR) on METOP

From 2006 to now... and up to potentially 2035 with IASI-NG

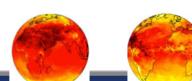

IASI is a FTIR spectrometer which was developed by CNES for Eumetsat and the programme include 3 instruments onboard METOP-A (2006), B (2012) and C (2018)..
=> sensibility in the high troposphere...

It will be followed by IASI NG programme for 15 more years..

Cyril Crevoisier, R. Armante, V. Capelle, F. Capalbo, A. Chédin, L. Crépeau, N. Meilhac, J. Pernin, N. A. Scott

<http://ara.abct.lmd.polytechnique.fr>

IASI-New Generation: improvement on

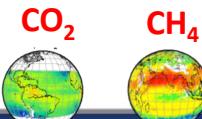

Carbon dioxide (CO_2)

IASI-NG will enable the use of SW channels (4.3. μm), giving access to a lower part of the atmosphere, with a much improved precision.

Spectral bands for IASI-NG	Noise	Improvement of the precision
15 μm		30 %
4.3 μm	IASI/2	0 %
15 + 4.3 μm		45 %

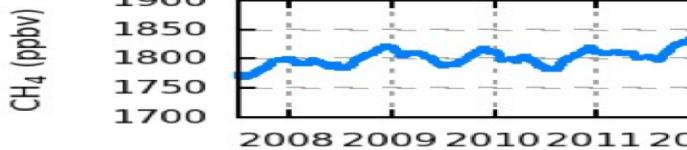

Methane (CH_4)

Less interferences with other gases and better noise will improve the precision of the retrievals.

Atmospheric GHG from IASI

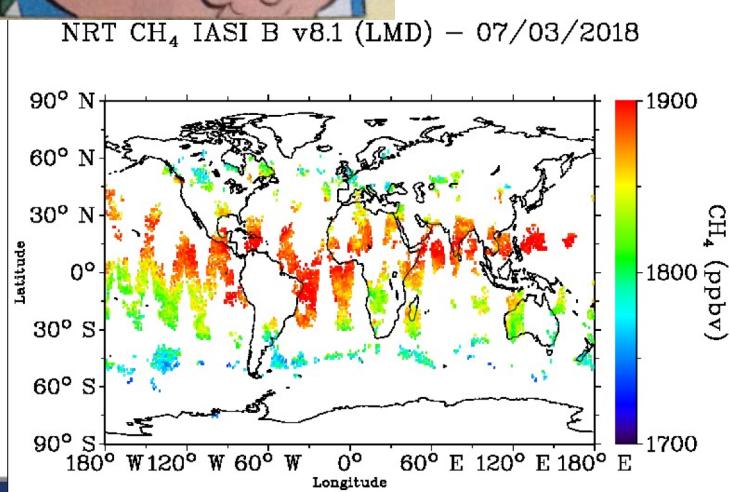

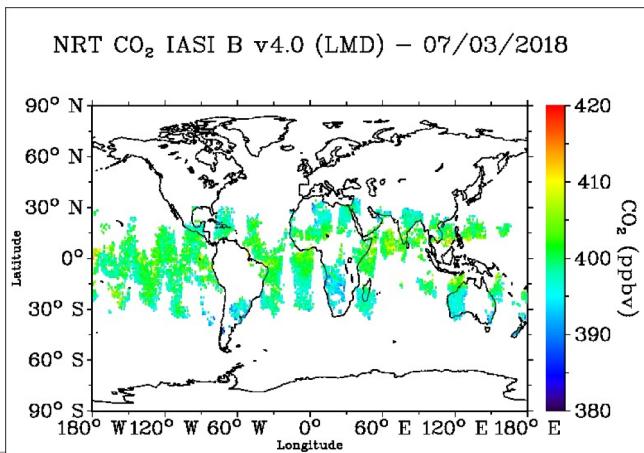

- **CH₄ + CO₂ mid-tropospheric columns from Metop-A + Metop-B (Crevoisier et al., in rev).**

- 2 production modes :

1. Near real-time (J+1)

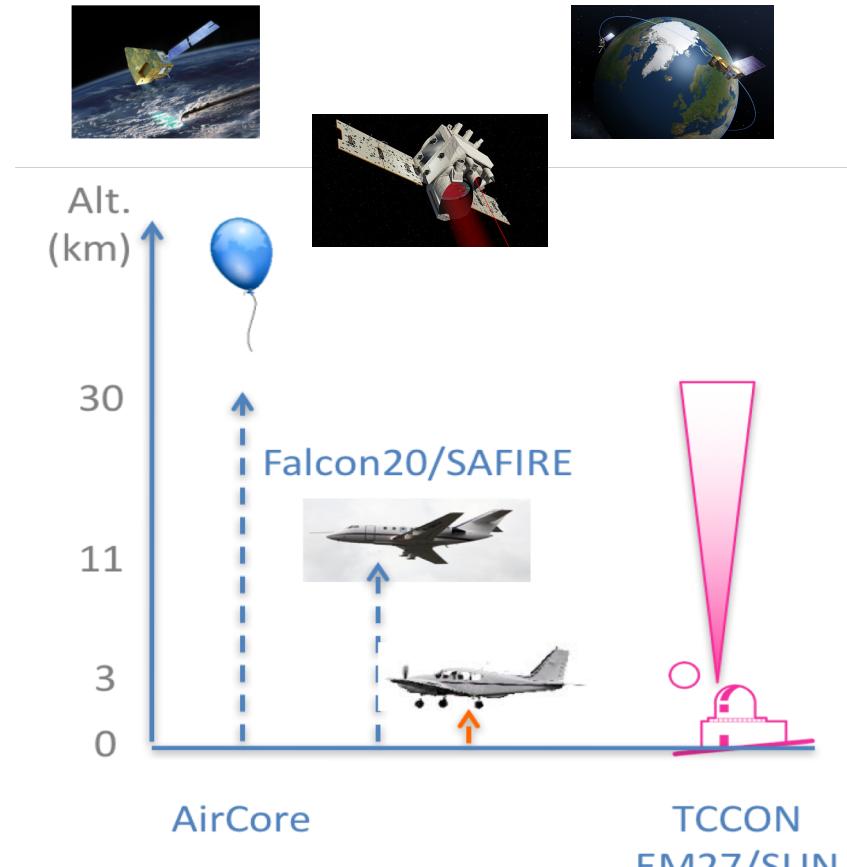

- to CAMS/Copernicus Services since 2012
- For CH₄ & CO₂ assimilation by l'ECCM & analyses.

Change Service (C3S) GHG (CH₄)

GHG validation campaigns , preparation work (2018-2021)

- **Instrumentation :**
 - On aircraft : SAFIRE Falcon20: Picarro, dropsondes and granulometry.
 - On balloon : AirCore under meteo balloons (at ASA and Trainou)
 - On ground : TCCON at Trainou.+ EM27/SUN (COCCON) from LSCE, CNES and LERMA/KIT., CRIS Interferometer from LOA. Mini Lidar for H₂O/T at (P. Chazette)
- **The CoMet campaign: 21 May – 2 June 2018 for the French part in collaboration with german part with HALO (with CHARM-F) flying above F20 for 11-15km part of the profile.**
- **Next campaigns:** from CoMet to MAGIC ..
 - Test of pixel heterogeneity, spectroscopie/Rad. Transfer with full column characterization.
 - Air sur Adour as a “super site”: EM27/SUN + Picarro (ICOS) + monthly launches of meteo balloons (AirCore, LOAC) + Rds.
 - Other regions: high latitudes (Kiruna + Siberia with YAK campaigns), tropics (new balloon site).

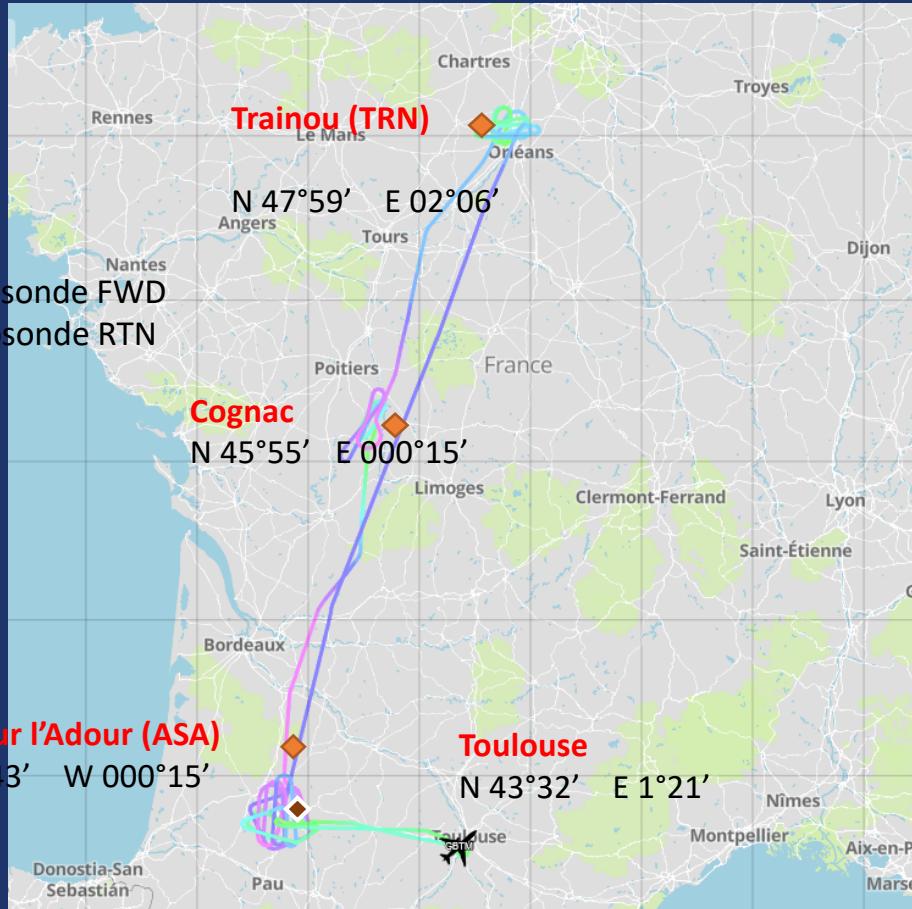

Example of campaign in France : preCoMet campaign (2017)

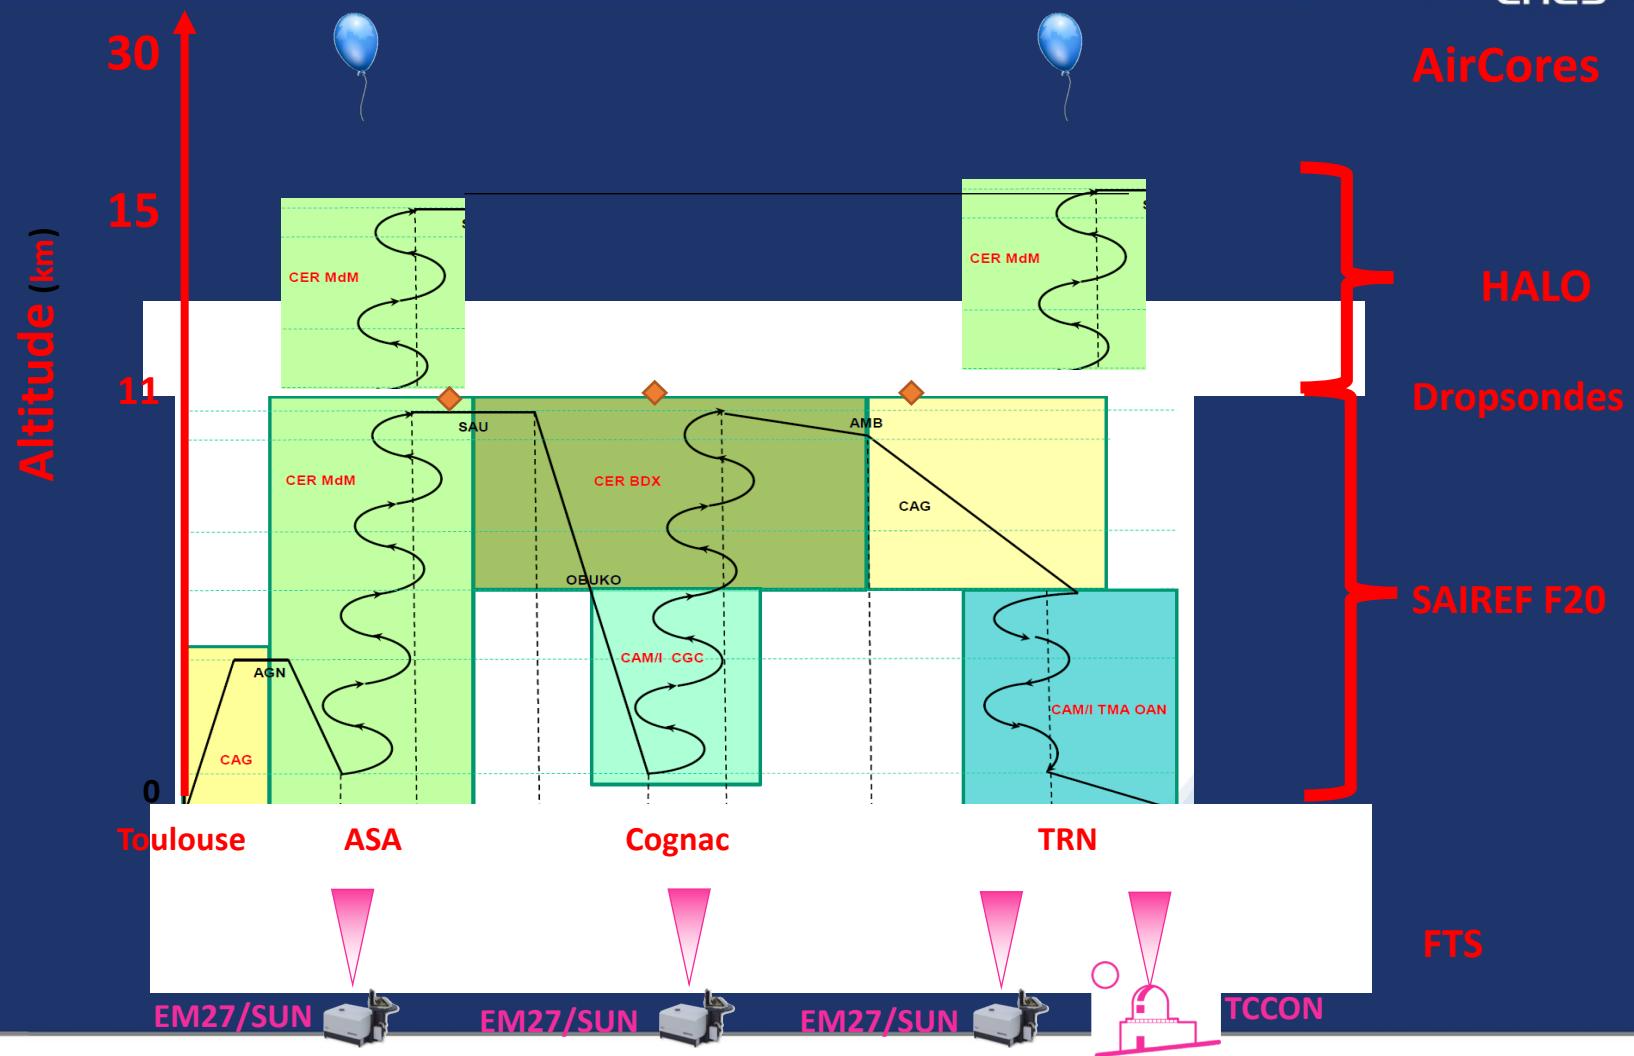

cnes

Flight plans

Forward: Toulouse → TRN (3h15)

Exemple of campaign in France : The CoMet campaign – draft

CNES Partnerships are essentials to build together..

- ❖ Collaboration with **NASA** (OCO 2 & GEoCarb teams) for Microcarb
- ❖ Collaboration with GOSAT 1 & 2/**JAXA-NIES** for GHG validation and calibration (with IASI, IASI NG, MERLIN, Microcarb)
- ❖ Collaboration with **UKSA** for Microcarb and **DLR** for MERLIN
- ❖ Strong support for the development of a sentinel 7 dedicated to CO2 in Copernicus (**ESA**).
- ❖ Discussions with **Eumetsat**, **European Commission** and **ECMWF** to contribute to Carbone Services
- ❖ Strong interest to develop synergies with chinese programm (**CNSA**, **CSA..**) on GHG...

THANKS !
