

Notes of CEOS Water Portal Session (WGISS-38)

1. Satoko Miura (JAXA) opened the session with a remark that there is a little update since the last meeting, but will have some new updates added by the end of this fiscal year.
2. Sinichi Sekioka (JAXA) gave a presentation on the status of CEOS Water Portal, focusing on the updates since the last meeting.
 1. NOAA as a new data partner (in progress)
 2. Search interface with GEO DAB for GEOWOW river discharge data (in progress)
 3. Reconstructing the portal based on the new architecture design (in progress) (IDN is not going to be used for the collection level search but GI-cat will be instead.)
 4. Future work items
 1. Synergy with other component of DIAS
 2. SSO enablement within DIAS (Water portal is a component)
3. QAs
 1. Do you have actual users accessing the portal today ? (Wyn)
 - Yes. We have over 200 views per day. (Satoko)
 2. I forgot the password for the water portal. And it didn't seem to have a way to retrieve or reset the password. It would be helpful if the “forgot password ?” link were there on the same place as the login window. (Nitant)
 - It will be updated when the new architecture is in place by the end of this Japanese fiscal year. (Yoshi)
 3. Is a single sign on (SSO) capability in place ? (Andy)
 - Not yet. But we plan to start working on it this fiscal year to achieve SSO between the water portal and other DIAS component. (Satoko)
 4. Does the portal support visualization capability ? (Nitant)
 - Yes. Users can view browse before they download. (Yoshi)
