

# Earth Observation Training, Education, and Capacity Development Network

## WHAT IS EOTEC DEVNET?

We are a network of networks created in 2021 to bring the power of satellite-derived Earth information to more users around the globe.

**Our aim:** Make Earth observation (EO) capacity building more accessible and relevant to users. Our goal is to increase the use of EO in decision-making.

**Our approach:** Improve collaboration among institutions providing EO capacity building. We seek to fill gaps, leverage resources, and reduce duplication of effort. We also foster knowledge-sharing and promote best practices on training needs assessment.

**Our thematic focus:** Sustainable development outcomes related to disaster risk reduction and climate adaptation and mitigation. This work is aligned with 3 major frameworks: the 2030 Agenda for Sustainable Development, the Paris Agreement on Climate Change, and the Sendai Framework for Disaster Risk Reduction 2015-2030.

**How we work:** Through regional Communities of Practice and supporting global structures.

We are currently scaling up Communities of Practice in four regions: Africa, Americas, Asia/Oceania and Europe.

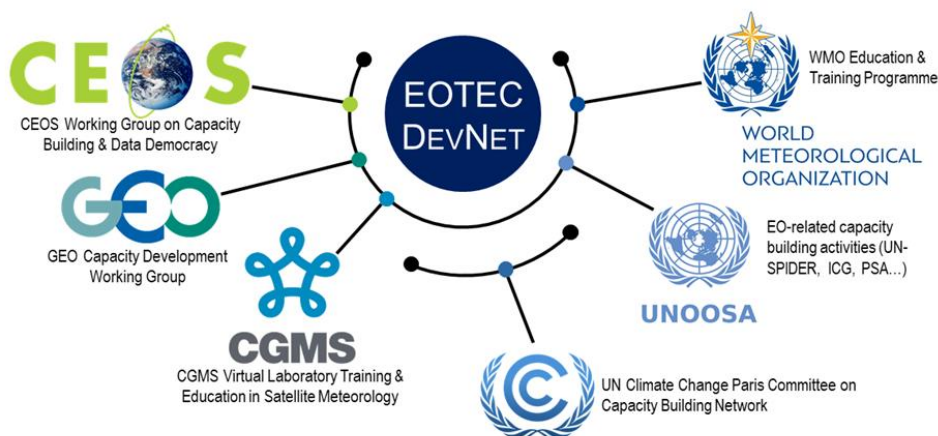

### JOIN US!

*Want to connect to global experts, find new collaboration partners, and be a leader in your field? We are looking for professionals engaged in EO-related capacity development to get involved in the Communities of Practice. We seek:*

- Capacity/Training Managers
- Trainers
- Educators
- Subject matter and technical specialists

Visit our [website](https://www.ceos.org/eotec) to learn more and sign up for updates.
